## 1.INTRODUCTION

11AK45 is a 50Hz colour television capable of driving 24" + CRT sizes( beginning from 24" 16:9 up to 33").

The chassis is capable of operation in PAL, SECAM, NTSC (playback) colour standards and multiple transmission standards as B/G, D/K, I/I', and L/L'.

Sound system output is supplying 2x10W (10%THD) for left and right outputs of 8ohm speakers.

TV supports FASTTEXT. It is possible to decode transmissions including high graphical data.

The chassis is equipped with three full EuroScarts, only one of them supports RGB input, one headphone output, one FAV input, one SVHS input (via SCART)

## 2.TUNER

The hardware and software of the TV is suitable for tuners, supplied by different companies, which are selected from the Service Menu. These tuners can be combined VHF, UHF tuners suitable for CCIR systems B/G, H, L, L', I and I'. The tuning is available through the digitally controlled I<sup>2</sup>C bus (PLL). Below you will find info on one of the Tuners in use.

### General description of UV1316:

The UV1316 tuner belongs to the UV 1300 family of tuners, which are designed to meet a wide range of applications. It is a combined VHF, UHF tuner suitable for CCIR systems B/G, H, L, L', I and I'. The low IF output impedance has been designed for direct drive of a wide variety of SAW filters with sufficient suppression of triple transient.

### Features of UV1316:

1. Member of the UV1300 family small sized UHF/VHF tuners
2. Systems CCIR: B/G, H, L, L', I and I'; OIRT: D/K
3. Digitally controlled (PLL) tuning via I<sup>2</sup>C-bus
4. Off-air channels, S-cable channels and Hyperband
5. World standardized mechanical dimensions and world standard pinning
6. Compact size
7. Complies to "CENELEC EN55020" and "EN55013"

### Pinning:

1. Gain control voltage (AGC) : 4.0V, Max: 4.5V
2. Tuning voltage
3. I<sup>2</sup>C-bus address select : Max: 5.5V
4. I<sup>2</sup>C-bus serial clock : Min:-0.3V, Max: 5.5V
5. I<sup>2</sup>C-bus serial data : Min:-0.3V, Max: 5.5V
6. Not connected
7. PLL supply voltage : 5.0V, Min: 4.75V, Max: 5.5V
8. ADC input
9. Tuner supply voltage : 33V, Min: 30V, Max: 35V
10. Symmetrical IF output 1
11. Symmetrical IF output 2

## 3.IF PART (TDA9885/86)

The TDA9885 is an alignment-free single standard (without positive modulation) vision and sound IF signal PLL.

The TDA9886 is an alignment-free multistandard (PAL, SECAM and NTSC) vision and sound IF signal PLL Both devices can be used for TV, VTR, PC and set-top box applications.

The following figure shows the simplified block diagram of the integrated circuit.

The integrated circuit comprises the following functional blocks:

VIF amplifier, Tuner and VIF-AGC, VIF-AGC detector, Frequency Phase-Locked Loop (FPLL) detector, VCO and divider, Digital acquisition help and AFC, Video demodulator and amplifier, Sound carrier trap, SIF amplifier, SIF-AGC detector, Single reference QSS mixer, AM demodulator, FM demodulator and acquisition help, Audio amplifier and mute time constant, I<sup>2</sup>C-bus transceivers and MAD (module address), Internal voltage stabilizer.

(7) Not connected for TDA8855.

#### 4.VIDEO SWITCH TEA6415

In case of three or more external sources are used, the video switch IC TEA6415 is used. The main function of this device is to switch 8 video-input sources on the 6 outputs. Each output can be switched on only one of each input. On each input an alignment of the lowest level of the signal is made (bottom of sync. top for CVBS or black level for RGB signals). Each nominal gain between any input and output is 6.5dB. For D2MAC or Chroma signal the alignment is switched off by forcing, with an external resistor bridge, 5VDC on the input. Each input can be used as a normal input or as a MAC or Chroma input (with external Resistor Bridge). All the switching possibilities are changed through the BUS. Driving 75ohm load needs an external resistor. It is possible to have the same input connected to several outputs.

#### 5.MULTI STANDARD SOUND PROCESSOR

The MSP 34x10G family of single-chip Multi-standard Sound Processors covers the sound processing of all analog TV-Standards worldwide, as well as the NICAM digital sound standards. The full TV sound processing, starting with analog sound IF signal-in, down to processed analog AF-out, is performed on a single chip. The DBX noise reduction, or alternatively, MICRONAS Noise Reduction (MNR) is performed alignment free. Other processed standards are the Japanese FM-FM multiplex standard (EIA-J) and the FM Stereo Radio standard.

#### 6.SOUND OUTPUT STAGE WITH TDA7269A

The TDA7269A is class AB dual Audio power amplifier assembled in the Multi-watt package, specially designed for high quality sound application as Hi-Fi music centers and stereo TV sets.

#### 7.BERTICAL OUTPUT STAGE WITH STV9379FA

The IC STV9379FA is the vertical deflection booster circuit. Two supply voltages, +14V and -14V are needed to scan the inputs VERT+ and VERT-, respectively. And a third supply voltage, +60V for the flyback limiting are needed. The vertical deflection coil is connected in series between the output and feedback to the input.

#### 8.VIDEO OUTPUT AMPLIFIER TDA6108

The TDA6108Q includes three video output amplifiers is intended to drive the three cathodes of a colour picture tube.

## **9. POWER SUPPLY (SMPS)**

The DC voltages required at various parts of the chassis are provided by an SMPS transformer controlled by the IC MC44608, which is designed for driving, controlling and protecting switching transistor of SMPS. The transformer generates 145V for FBT input, +/-14V for audio amplifier, 5V and 3.3V stand by voltage and 8V, 12V and 5V supplies for other different parts of the chassis.

An optocoupler is used to control the regulation of line voltage and stand-by power consumption. There is a regulation circuit in secondary side. This circuit produces a control voltage according to the changes in 145V DC voltage, via an optocoupler (TCET1102G) to pin3 of the IC.

During the switch on period of the transistor, energy is stored in the transformer. During the switch off period energy is fed to the load via secondary winding. By varying switch-on time of the power transistor, it controls each portion of energy transferred to the second side such that the output voltage remains nearly independent of load variations.

## **10. MICROCONTROLLER SDA55XX**

### **10.1. General Features**

- Feature selection via special function register
- Simultaneous reception of TTX, VPS, PDC, and WSS (line 23)
- Supply Voltage 2.5 and 3.3 V
- ROM version package PSDIP52-2, PMQFP64-1
- Romless version package PMQFP100-2, PLCC84-2

### **10.2. External Crystal and Programmable Clock Speed**

- Single external 6MHz crystal, all necessary clocks are generated internally
- CPU clock speed selectable via special function registers.
- Normal Mode 33.33 MHz CPU clock, Power Save mode 8.33 MHz

### **10.3. Microcontroller Features**

- 8bit 8051 instruction set compatible CPU.
- 33.33-MHz internal clock (max.)
- 0.360 ms (min.) instruction cycle
- Two 16-bit timers
- Watchdog timer
- Capture compare timer for infrared remote control decoding
- Pulse width modulation unit (2 channels 14 bit, 6 channels 8 bit)
- ADC (4 channels, 8 bit)
- UART (rx, tx)

### **10.4. Memory**

- Non-multiplexed 8-bit data and 16 ... 20-bit address bus (ROMless Version)
- Memory banking up to 1Mbyte (Romless version)
- Up to 128 Kilobyte on Chip Program ROM
- Eight 16-bit data pointer registers (DPTR)
- 256-bytes on-chip Processor Internal RAM (IRAM)
- 128bytes extended stack memory.
- Display RAM and TXT/VPS/PDC/WSS-Acquisition-Buffer directly accessible via MOVX
- UP to 16KByte on Chip Extended RAM (XRAM) consisting of;
  - 1 Kilobyte on-chip ACQ-buffer-RAM (access via MOVX)
  - 1 Kilobyte on-chip extended-RAM (XRAM, access via MOVX) for user software
  - 3 Kilobyte Display Memory

### **10.5. Display Features**

- ROM Character Set Supports all East and West European Languages in single device
- Mosaic Graphic Character Set
- Parallel Display Attributes
- Single/Double Width/Height of Characters
- Variable Flash Rate
- Programmable Screen Size (25 Rows x 33...64 Columns)
- Flexible Character Matrixes (HxV) 12 x 9...16
- Up to 256 Dynamical Redefinable Characters in standard mode; 1024 Dynamical Redefinable Characters in Enhanced Mode
- CLUT with up to 4096 colour combinations

- Up to 16 Colours per DRCS Character
- One out of Eight Colours for Foreground and Background Colours for 1-bit DRCS and ROM Characters
- Shadowing
- Contrast Reduction
- Pixel by Pixel Shiftable Cursor With up to 4 Different Colours
- Support of Progressive Scan and 100 Hz.
- 3 X 4Bits RGB-DACs On-Chip
- Free Programmable Pixel Clock from 10 MHz to 32MHz
- Pixel Clock Independent from CPU Clock
- Multinorm H/V-Display Synchronization in Master or Slave Mode

#### **10.6.Acquisition Features**

- Multi-standard Digital Data Slicer
- Parallel Multi-norm Slicing (TTX, VPS, WSS, CC, G+)
- Four Different Framing Codes Available
- Data Caption only limited by available Memory
- Programmable VBI-buffer
- Full Channel Data Slicing Supported
- Fully Digital Signal Processing
- Noise Measurement and Controlled Noise Compensation
- Attenuation Measurement and Compensation
- Group Delay Measurement and Compensation
- Exact Decoding of Echo Disturbed Signals

#### **10.7.Ports**

- One 8-bit I/O-port with open drain output and optional I<sup>2</sup>C Bus emulation support (Port0)
- Two 8-bit multifunction I/O-ports (Port1, Port3)
- One 4-bit port working as digital or analogue inputs for the ADC (Port2)
- One 2-bit I/O port with secondary function (P4.2, 4.3, 4.7)
- One 4-bit I/O-port with secondary function (P4.0, 4.1, 4.4) (Not available in P-SDIP 52)

### **11.CLASS AB STEREO HEADPHONE DRIVER TDA1308**

The TDA1308 is an integrated class AB stereo headphone driver contained in a DIP8 plastic package. The device is fabricated in a 1 mm CMOS process and has been primarily developed for portable digital audio applications.

### **12.SAW FILTERS**

K3953M:

#### **Standard**

B/G, D/K, I, L/L'

#### **Features**

TV IF filter with Nyquist slopes at 33,90 MHz and 38,90 MHz

Constant group delay

Suitable for CENELEC EN 55020

#### **Terminals**

Tinned CuFe alloy

#### **Pin configuration**

1 Input

2 Input - ground

3 Chip carrier - ground

4 Output

5 Output

K3958M:

#### **Standard**

B/G, D/K, I, L/L'

#### **Features**

TV IF filter with Nyquist slopes at 33.90 MHz and 38.90 MHz

Constant group delay

Terminal and Pin configuration are the same with K3953M

K9356M:

**Standard**

B/G, D/K, I, L

**Features**

TV IF audio filter with pass band for sound carriers at 32,40 MHz (D/K, L), 32,90 MHz (I) and 33,40 MHz (B/G)

Terminal and Pin configuration are the same with K3953M

K9656M:

**Standard**

B/G, D/K, I, L/L'

**Features**

TV IF audio filter with two channels

Channel 1 (L') with one pass band for sound carriers at 40,40 MHz (L') and 39,75 MHz (L' - NICAM)

Channel 2 (B/G, D/K, L, I) with one pass band for sound carriers between 32,35 MHz and 33,40 MHz

Terminal and Pin configuration are the same with K3953M

## 13.IC DESCRIPTIONS

LM317T

TEA6415

TDA7269A

24C08

MC44608

TDA9885T

TDA1308T

VDP3130Y

STV9379FA

LM7805/LM7808

SDA55XX

TCET1102G

### 13.1.LM317T

#### 13.1.1.Description

The LM317T is an adjustable 3 terminal positive voltage regulator capable of supplying in excess of 1.5 amps over an output range of 1.25 to 37 volts. This voltage regulator is exceptionally easy to use and requires only two external resistors to set the output voltage. Further, it employs internal current limiting, thermal shutdown and safe area compensation, making it essentially blow-out proof. The LM317 serves a wide variety of applications including local, on card regulation. This device can also be used to make a programmable output regulator, or by connecting a fixed resistor between the adjustment and output, the LM317 can be used as a precision current regulator.

#### 13.1.2.Features

- Output Current in Excess of 1.5 A
- Output Adjustable between 1.2 V and 37 V
- Internal Thermal Overload Protection
- Internal Short Circuit Current Limiting Constant with Temperature
- Output Transistor Safe-Area Compensation
- Floating Operation for High Voltage Applications
- Available in Surface Mount D<sup>2</sup>PAK, and Standard 3-Lead Transistor Package
- Eliminates Stocking many Fixed Voltages

### 13.2.TDA1308T

#### 13.2.1.General Description

The TDA1308 is an integrated class AB stereo headphone driver contained in an SO8 or a DIP8 plastic package. The device is fabricated in a 1 mm CMOS process and has been primarily developed for portable digital audio applications. It gets its input from two analog audio outputs (DACA\_L and DACA\_R) of MSP 34x0G. The gain of the output is adjustable by the feedback resistor between the inputs and outputs.

#### 13.2.2.Features

- Wide temperature range
- No switch ON/OFF clicks
- Excellent power supply ripple rejection

- Low power consumption
- Short-circuit resistant
- High performance
- high signal-to-noise ratio
- High slew rate
- Low distortion
- Large output voltage swing.

### 13.2.3.Pinning

SYMBOL	PIN	DESCRIPTION
OUTA	1	Output A
INA(neg)	2	Inverting input A
INA(pos)	3	Non-inverting input A
V <sub>SS</sub>	4	Negative supply
INB(pos)	5	Non-inverting input B
INB(neg)	6	Inverting input B
OUTB	7	Output B
V <sub>DD</sub>	8	Positive supply

## 13.3.MSP34X0G (MSP3410G)

### 13.3.1.Description

The MSP 34x0G family of single-chip Multi standard Sound Processors covers the sound processing of all analog TV-Standards worldwide, as well as the NICAM digital sound standards. The full TV sound processing, starting with analog sound IF signal-in, down to processed analog AF-out, is performed on a single chip. Figure shows a simplified functional block diagram of the MSP 34x0G.

This new generation of TV sound processing ICs now includes versions for processing the multi channel television sound (MTS) signal conforming to the standard recommended by the Broadcast Television Systems Committee (BTSC). The DBX noise reduction, or alternatively, MICRONAS Noise Reduction (MNR) is performed alignment free. Other processed standards are the Japanese FM-FM multiplex standard (EIA-J) and the FM Stereo Radio standard. Current ICs have to perform adjustment procedures in order to achieve good stereo separation for BTSC and EIA-J. The MSP 34x0G has optimum stereo performance without any adjustments.

All MSP 34x0G versions are pin and software downward compatible to the MSP34x0D. The MSP34x0G further simplifies controlling software. Standard selection requires a single I<sup>2</sup>C transmission only.

The MSP 34x0G has built-in automatic functions: The IC is able to detect the actual sound standard automatically (Automatic Standard Detection). Furthermore, pilot levels and identification signals can be evaluated internally with subsequent switching between mono/stereo/bilingual; no I<sup>2</sup>C interaction is necessary (Automatic Sound Selection).

### 13.3.2.Features

Standard Selection with single I<sup>2</sup>C transmission  
 Automatic Standard Detection of terrestrial TV standards  
 Automatic Sound Selection (mono/stereo/bilingual), new registers MODUS, STATUS  
 Two selectable sound IF (SIF) inputs  
 Automatic Carrier Mute function  
 Interrupt output programmable (indicating status change)  
 Loudspeaker / Headphone channel with volume, balance, bass, treble, loudness  
 AVC: Automatic Volume Correction  
 Subwoofer output with programmable low-pass and complementary high-pass filter  
 5-band graphic equalizer for loudspeaker channel  
 Spatial effect for loudspeaker channel  
 Four Stereo SCART (line) inputs, one Mono input; two Stereo SCART outputs  
 Complete SCART in/out switching matrix  
 Two I<sup>2</sup>S inputs; one I<sup>2</sup>S output  
 Dolby Pro Logic with DPL 351xA coprocessor  
 All analog FM-Stereo A2 and satellite standards; AM-SECAM L standard  
 Simultaneous demodulation of (very) high-deviation FM-Mono and NICAM  
 Adaptive deemphasis for satellite (Wegener-Panda, acc. to ASTRA specification)  
 ASTRA Digital Radio (ADR) together with DRP 3510A  
 All NICAM standards  
 Korean FM-Stereo A2 standard

### 13.3.3.Pin connections

NC = not connected; leave vacant  
 LV = if not used, leave vacant  
 X = obligatory; connect as described in circuit diagram  
 DVSS: if not used, connect to DVSS  
 AHVSS: connect to AHVSS

PLCC 68-pin	Pin No.				Pin Name	Type	Connection (if not used)	Short Description
	PSDIP 64-pin	PSDIP 52-pin	PQFP 80-pin	PLQFP 64-pin				
1	16	14	9	8	ADR_WS	OUT	LV	ADR word strobe
2	-	-	-	-	NC		LV	Not connected
3	15	13	8	7	ADR_DA	OUT	LV	ADR Data Output
4	14	12	7	6	I2S_DA_IN1	IN	LV	I <sup>2</sup> S1 data input

## 13.4.VDP313xY

### 13.4.1.Introduction

The VDP 313xY is a video IC family of high-quality single-chip video processors. Modular design and a sub-micron technology allow the economic integration of features in all classes of TV sets. The VDP 313xY family is based on the VDP 31xxB including YCRCb inputs for DVD component signals.

The VDP 313xY includes complete video, display and deflection processing. All processing is done digitally, the video frontend and video backend are interfacing to the analog world. Most functions of the VDP can be controlled by software via I<sup>2</sup>C-Bus interface

### 13.4.2.Features

#### Video Decoding and Processing

- four CVBS, one S-VHS input, one YC R C B component input
- integrated high-quality A/D converters and associated clamp and AGC circuits
- adaptive 2H comb filter Y/C separator
- multistandard colour decoder PAL/NTSC/SECAM including all substandards
- multistandard sync decoder
- automatic standard recognition
- black-line detector
- linear horizontal scaling (0.25...4), as well as nonlinear horizontal scaling “Panoramavision”
- black-level expander
- dynamic peaking
- soft limiter (gamma correction)
- colour transient improvement

#### RGB Processing and Deflection

- programmable RGB matrix
- two analog RGB / Fastblank inputs
- half-contrast switch
- picture frame generator
- scan velocity modulation output
- high-performance H/V deflection
- separate ADC for tube measurements
- EHT compensation
- angle and bow correction
- one 20.25 MHz crystal, few external components
- I<sup>2</sup>C-Bus Interface
- 64-pin PSDIP package

### 13.4.3.Pin Connections and short descriptions

NC = not connected

X = obligatory; connect as described in circuit diagram

OUT = Output

LV = if not used, leave vacant

IN = Input

SUPPLY = Supply Pin

Pin no PSDIP 64-pin	Pin name	Type	Connection (if not used)	Short description
1	TEST	IN	GNDD	Test Input

63	VIN3	IN	VRT	Analog Video 3 Input
64	VIN4	IN	VRT	Analog Video 4 Input

## 13.5.TEA6415C

### 13.5.1.General Description

The main function of the IC is to switch 8 video input sources on 6 outputs. Each output can be switched on only one of each input. On each input an alignment of the lowest level of the signal is made (bottom of synch. top for CVBS or black level for RGB signals). Each nominal gain between any input and output is 6.5dB. For D2MAC or Chroma signal the alignment is switched off by forcing, with an external resistor bridge, 5 V<sub>dc</sub> on the input. Each input can be used as a normal input or as a MAC or Chroma input (with external resistor bridge). All the switching possibilities are changed through the BUS. Driving 75Ω load needs an external transistor. It is possible to have the same input connected to several outputs. The starting configuration upon power on (power supply: 0 to 10V) is undetermined. In this case, 6 words of 16 bits are necessary to determine one configuration. In other case, 1 word of 16 bits is necessary to determine one configuration.

### 13.5.2.Features

- 20MHz Bandwidth
- Cascadable with another TEA6415C (Internal address can be changed by pin 7 voltage)
- 8 Inputs (CVBS, RGB, MAC, CHROMA,...)
- 6 Outputs
- Possibility of MAC or chroma signal for each input by switching-off the clamp with an external resistor bridge
- Bus controlled

- 6.5dB gain between any input and output
- 55dB crosstalk at 5mHz
- Fully ESD protected

### 13.5.3.Pinning

1. Input : Max : 2Vpp, Input Current: 1mA, Max : 3mA
2. Data : Low level: -0.3V Max: 1.5V,  
High level : 3.0V Max : Vcc+0.5V
3. Input : Max : 2Vpp, Input Current: 1mA, Max : 3mA
4. Clock : Low level: -0.3V Max: 1.5V,  
High level : 3.0V Max : Vcc+0.5V
5. Input : Max : 2Vpp, Input Current: 1mA, Max : 3mA
6. Input : Max : 2Vpp, Input Current: 1mA, Max : 3mA
7. Prog
8. Input : Max : 2Vpp, Input Current: 1mA, Max: 3mA
9. Vcc : 12V
10. Input : Max : 2Vpp, Input Current: 1mA, Max : 3mA
11. Input : Max : 2Vpp, Input Current: 1mA, Max : 3mA
12. Ground
13. Output : 5.5Vpp, Min : 4.5Vpp
14. Output : 5.5Vpp, Min : 4.5Vpp
15. Output : 5.5Vpp, Min : 4.5Vpp
16. Output : 5.5Vpp, Min : 4.5Vpp
17. Output : 5.5Vpp, Min : 4.5Vpp
18. Output : 5.5Vpp, Min : 4.5Vpp
19. Ground
20. Input : Max : 2Vpp, Input Current : 1mA, Max : 3mA

## 13.6.STV9379FA

### 13.6.1.Description

Designed for monitors and high performance TVs, the STV9379FA vertical deflection booster can handle flyback voltage up to 90V. Further to this, it is possible to have a flyback voltage, which is more than the double of the supply (Pin 2). This allows to decrease the power consumption, or to decrease the flyback time for a given supply voltage. The STV9379FA operates with supplies up to 42V and provides up to 2.6APP output current to drive the yoke. The STV9379FA is offered in HEPTAWATT package.

### 13.6.2.Features

Power Amplifier  
 Thermal Protection  
 Output Current Up To 2.6APP  
 Flyback Voltage Up To 90V (on Pin 5)  
 Suitable For DC Coupling Application  
 External Flyback Supply

### 13.6.3.Pinning

Pin1 : Output Stage Supply  
 Pin2 : Output  
 Pin3 : GND or Negative Supply  
 Pin4 : Flyback Supply  
 Pin5 : Supply Voltage  
 Pin6 : Inverting Input  
 Pin7 : Non-inverting Input

## 13.7.TDA7269A

### 13.7.1.Description

The TDA7269A is class AB dual Audio power amplifier assembled in the Multiwatt package, specially designed for high quality sound application as Hi-Fi music centers and stereo TV sets.

### 13.7.2.Features

Wide Supply Voltage Range Up To  $\pm 20V$   
Split Supply  
High Output Power  
14 + 14W @THD =10%,  $R_L = 8\Omega$ ,  $V_S = +16V$   
No Pop at Turn-On/Off  
Mute (Pop Free)  
Stand-By Feature (Low  $I_q$ )  
Short Circuit Protection To Gnd  
Thermal Overload Protection

## 13.8.LM7800 (LM7805/LM7808)

### 13.8.1.Description

The L7800 series of three-terminal positive regulators is available in TO-220 TO-220FP TO-3 and D 2 PAK packages and several fixed output voltages, making it useful in a wide range of applications. These regulators can provide local on-card regulation, eliminating the distribution problems associated with single point regulation. Each type employs internal current limiting, thermal shutdown and safe area protection, making it essentially indestructible. If adequate heat sinking is provided, they can deliver over 1A output current. Although designed primarily as fixed voltage regulators, these devices can be used with external components to obtain adjustable voltages and currents.

### 13.8.2.Features

Output Current Up To 1.5 A  
Output Voltages of 5; 5.2; 6; 8; 8.5; 9; 12; 15; 18; 24V  
Thermal Over load protection  
Short Circuit Protection  
Output Transition SOA Protection

## 13.9.AT24C08

### 13.9.1.Description

The AT24C01A/02/04/08/16 provides 1024/2048/4096/8192/16384 bits of serial electrically erasable and programmable read-only memory (EEPROM) organized as 128/256/512/1024/2048 words of 8 bits each. The device is optimized for use in many industrial and commercial applications where low-power and low-voltage operation are essential. The AT24C01A/02/04/08/16 is available in space-saving 8-pin PDIP, (AT24C01A/02/04/08/16), 8-lead TSSOP (AT24C01A/02/04/08/16) and 8-lead JEDEC SOIC (AT24C01A/02/04/08/16) packages and is accessed via a 2-wire serial interface. In addition, the entire family is available in 5.0V (4.5V to 5.5V), 2.7V (2.7V to 5.5V), 2.5V (2.5V to 5.5V) and 1.8V (1.8V to 5.5V) versions.

### 13.9.2.Features

- Low-voltage and Standard-voltage Operation
  - 5.0 (V CC = 4.5V to 5.5V)
  - 2.7 (V CC = 2.7V to 5.5V)
  - 2.5 (V CC = 2.5V to 5.5V)
  - 1.8 (V CC = 1.8V to 5.5V)
- Internally Organized 128 x 8 (1K), 256 x 8 (2K), 512 x 8 (4K), 1024 x 8 (8K) or 2048 x 8 (16K)
- 2-wire Serial Interface
- Schmitt Trigger, Filtered Inputs for Noise Suppression
- Bi-directional Data Transfer Protocol
- 100 kHz (1.8V, 2.5V, 2.7V) and 400 kHz (5V) Compatibility
- Write Protect Pin for Hardware Data Protection

- 8-byte Page (1K, 2K), 16-byte Page (4K, 8K, 16K) Write Modes
- Partial Page Writes are Allowed
- Self-timed Write Cycle (10 ms max)
- High-reliability
  - Endurance: 1 Million Write Cycles
  - Data Retention: 100 Years
- Automotive Grade and Extended Temperature Devices Available
- 8-lead JEDEC SOIC, 8-pin PDIP and 8-lead TSSOP Packages

### 13.9.3.Pin Configurations

Pin name	Function
A0-A2	Address Inputs
SDA	Serial Data
SCL	Serial Clock Input
WP	Write Protect
NC	No Connect

## 13.10.SDA5555

### 13.10.1.General definition

The SDA55XX is a single chip teletext decoder for decoding World System Teletext data as well as Video Programming System (VPS), Program Delivery Control (PDC), and Wide Screen Signalling (WSS) data used for PAL plus transmissions (Line 23). The device also supports Closed caption acquisition and decoding. The device provides an integrated general-purpose, fully 8051-compatible Microcontroller with television specific hardware features. Microcontroller has been enhanced to provide powerful features such as memory banking, data pointers, and additional interrupts etc. The on-chip display unit for displaying Level 1.5 teletext data can also be used for customer defined on screen displays. Internal XRAM consists of up to 16 Kbytes. Device has an internal ROM of up to 128 KBytes. ROMless versions can access up to 1 MByte of external RAM and ROM. The SDA 55XX supports a wide range of standards including PAL, NTSC and contains a digital slicer for VPS, WSS, PDC, TTX and Closed Caption, an accelerating acquisition hardware module, a display generator for Level 1.5 TTX data and powerful On screen Display capabilities based on parallel attributes, and Pixel oriented characters (DRCS).

### 13.10.2.Features

#### General

- Feature selection via special function register
- Simultaneous reception of TTX, VPS, PDC, and WSS (line 23)
- Supply Voltage 2.5 and 3.3 V
- ROM version package PSDIP52-2, PMQFP64-1
- Romless version package PMQFP100-2, PLCC84-2

#### External Crystal and Programmable Clock Speed

- Single external 6MHz crystal, all necessary clocks are generated internally
- CPU clock speed selectable via special function registers.
- Normal Mode 33.33 MHz CPU clock, Power Save mode 8.33 MHz

#### Microcontroller Features

- 8bit 8051 instruction set compatible CPU.
- 33.33-MHz internal clock (max.)
- 0.360ms (min.) instruction cycle
- Two 16-bit timers
- Watchdog timer
- Capture compare timer for infrared remote control decoding
- Pulse width modulation unit (2 channels 14 bit, 6 channels 8 bit)
- ADC (4 channels, 8 bit)
- UART

## Memory

- Non-multiplexed 8-bit data and 16 ... 20-bit address bus (ROMless Version)
- Memory banking up to 1Mbyte (Romless version)
- Up to 128 Kilobyte on Chip Program ROM
- Eight 16-bit data pointer registers (DPTR)
- 256-bytes on-chip Processor Internal RAM (IRAM)
- 128bytes extended stack memory.
- Display RAM and TXT/VPS/PDC/WSS-Acquisition-Buffer directly accessible via MOVX
- UP to 16KByte on Chip Extended RAM (XRAM) consisting of;
  - 1 Kilobyte on-chip ACQ-buffer-RAM (access via MOVX)
  - 1 Kilobyte on-chip extended-RAM (XRAM, access via MOVX) for user software
  - 3 Kilobyte Display Memory

## Display Features

- ROM Character Set Supports all East and West European Languages in single device
- Mosaic Graphic Character Set
- Parallel Display Attributes
- Single/Double Width/Height of Characters
- Variable Flash Rate
- Programmable Screen Size (25 Rows x 33...64 Columns)
- Flexible Character Matrixes (HxV) 12 x 9...16
- Up to 256 Dynamical Redefinable Characters in standard mode; 1024 Dynamical Redefinable Characters in Enhanced Mode
- CLUT with up to 4096 colour combinations
- Up to 16 Colours per DRCS Character
- One out of Eight Colours for Foreground and Background Colours for 1-bit DRCS and ROM Characters
- Shadowing
- Contrast Reduction
- Pixel by Pixel Shiftable Cursor With up to 4 Different Colours
- Support of Progressive Scan and 100 Hz.
- 3 X 4Bits RGB-DACs On-Chip
- Free Programmable Pixel Clock from 10 MHz to 32MHz
- Pixel Clock Independent from CPU Clock
- Multinorm H/V-Display Synchronization in Master or Slave Mode

## Acquisition Features

- Multistandard Digital Data Slicer
- Parallel Multi-norm Slicing (TTX, VPS, WSS, CC, G+)
- Four Different Framing Codes Available
- Data Caption only Limited by available Memory
- Programmable VBI-buffer
- Full Channel Data Slicing Supported
- Fully Digital Signal Processing
- Noise Measurement and Controlled Noise Compensation
- Attenuation Measurement and Compensation
- Group Delay Measurement and Compensation
- Exact Decoding of Echo Disturbed Signals

## Ports

- One 8-bit I/O-port with open drain output and optional I<sup>2</sup>C Bus emulation support (Port 0)
- Two 8-bit multifunction I/O-ports (Port 1, Port 3)
- One 4-bit port working as digital or analog inputs for the ADC (Port 2)
- One 2-bit I/O port with secondary functions (P4.2, 4.3, 4.7)
- One 4-bit I/O-port with secondary function (P4.0, 4.1, 4.4) (Not available in P-SDIP 52)

## 13.11.MC44608

### 13.11.1.Description

The MC44608 is a high performance voltage mode controller designed for off-line converters. This high voltage circuit that integrates the start-up current source and the oscillator capacitor, requires few

external components while offering a high flexibility and reliability. The device also features a very high efficiency stand-by management consisting of an effective Pulsed Mode operation. This technique enables the reduction of the stand-by power consumption to approximately 1W while delivering 300mW in a 150W SMPS.

- Integrated Start-Up Current Source
- Lossless Off-Line Start-Up
- Direct Off-Line Operation
- Fast Start-Up

### 13.11.2.General Features

- Flexibility
- Duty Cycle Control
- Under voltage Lockout with Hysteresis
- On Chip Oscillator Switching Frequency 40, or 75kHz
- Secondary Control with Few External Components

#### Protections

- Maximum Duty Cycle Limitation
- Cycle by Cycle Current Limitation
- Demagnetization (Zero Current Detection) Protection
- “Over Vcc Protection” Against Open Loop
- Programmable Low Inertia Over Voltage Protection Against Open Loop
- Internal Thermal Protection

#### GreenLine™ Controller

- Pulsed Mode Techniques for a Very High Efficiency Low Power Mode
- Lossless Startup
- Low dV/dT for Low EMI Radiations

### 13.11.3.Pin Connections

### 13.11.4.Pin Function description

Pin	Name	Description
1	Demag	The Demag pin offers 3 different functions: Zero voltage crossing detection (50mV), 24mA current detection and 120mA current detection. The 24mA level is used to detect the secondary reconfiguration status and the 120mA level to detect an Over Voltage status called Quick OVP.
2	ISENSE	The Current Sense pin senses the voltage developed on the series resistor inserted in the source of the power MOSFET. When I sense reaches 1V, the Driver output (pin 5) is disabled. This is known as the Over Current Protection function. A 200mA current source is flowing out of the pin 3 during the start-up phase and during the switching phase in case of the Pulsed Mode of operation. A resistor can be inserted between the sense resistor and the pin 3; thus a programmable peak current detection can be performed during the SMPS stand-by mode.
3	Control Input	A feedback current from the secondary side of the SMPS via the opto-coupler is injected into this pin. A resistor can be connected between this pin and GND to allow the programming of the Burst duty cycle during the Stand-by mode.
4	Ground	This pin is the ground of the primary side of the SMPS.
5	Driver	The current and slew rate capability of this pin are suited to drive Power MOSFETs.
6	VCC	This pin is the positive supply of the IC. The driver output gets disabled when the voltage becomes higher than 15V and the operating range is between 6.6V and 13V. An intermediate voltage level of 10V creates a disabling condition called Latched Off phase.
7		This pin is to provide isolation between the Vi pin 8 and the VCC pin 6.
8	Vi	This pin can be directly connected to a 500V voltage source for start-up function of the IC. During the Start-up phase a 9 mA current source is internally delivered to the VCC pin 6 allowing a rapid charge of the VCC capacitor. As soon as the IC starts-up, this current source is disabled.

## 13.12.TCET1102G

### 13.12.1.Description

The TCET110/ TCET2100/ TCET4100 consists of a phototransistor optically coupled to a gallium arsenide infrared-emitting diode in a 4-lead up to 16-lead plastic dual inline package. The elements are mounted on one lead frame using a **coplanar technique**, providing a fixed distance between input and output for highest safety requirements.

### 13.12.2.Applications

Circuits for safe protective separation against electrical shock according to safety class II (reinforced isolation):

For appl. class I – IV at mains voltage  $\leq 300$  V

For appl. class I – III at mains voltage  $\leq 600$  V

According to VDE 0884, table 2, suitable for: **Switch-mode power supplies, line receiver, computer peripheral interface, microprocessor system interface.**

### 13.12.3.Features

#### VDE 0884 related features:

Rated impulse voltage (transient overvoltage)  $V_{IOTM} = 8$  kV peak

Isolation test voltage (partial discharge test voltage)  $V_{pd} = 1.6$  kV

Rated isolation voltage (RMS includes DC)  $V_{IOWM} = 600$  V RMS (848 V peak)

Rated recurring peak voltage (repetitive)  $V_{IORM} = 600$  V RMS

#### General features:

CTR offered in 9 groups

Isolation materials according to UL94-VO

Pollution degree 2 (DIN/VDE 0110 / resp. IEC 664)

Climatic classification 55/100/21 (IEC 68 part 1)

Special construction: Therefore, extra low coupling capacity of typical 0.2pF, high **Common Mode Rejection**

Low temperature coefficient of CTR

G = Leadform 10.16 mm; provides creepage distance > 8 mm, for TCET2100/ TCET4100 optional; suffix letter 'G' is not marked on the optocoupler

Coupling System U

## 13.13.TDA9885T

### 13.13.1.General Description

The TDA9885 is an alignment-free single standard (without positive modulation) vision and sound IF signal PLL.

### 13.13.2.Features

- 5 V supply voltage
- Gain controlled wide-band Vision Intermediate Frequency (VIF) amplifier (AC-coupled)
- Multistandard true synchronous demodulation with active carrier regeneration (very linear demodulation, good intermodulation figures, reduced harmonics, excellent pulse response)
- Gated phase detector for L/L accent standard
- Fully integrated VIF Voltage Controlled Oscillator (VCO), alignment-free; frequencies switchable for all negative and positive modulated standards via I<sup>2</sup>C-bus
- Digital acquisition help, VIF frequencies of 33.4, 33.9, 38.0, 38.9, 45.75 and 58.75 MHz
- 4 MHz reference frequency input [signal from Phase-Locked Loop (PLL) tuning system] or operating as crystal oscillator
- VIF Automatic Gain Control (AGC) detector for gain control, operating as peak sync detector for negative modulated signals and as a peak white detector for positive modulated signals
- Precise fully digital Automatic Frequency Control (AFC) detector with 4-bit digital-to-analog converter; AFC bits via I<sup>2</sup>C -bus readable
- TakeOver Point (TOP) adjustable via I<sup>2</sup>C-bus or alternatively with potentiometer
- Fully integrated sound carrier trap for 4.5, 5.5, 6.0 and 6.5 MHz, controlled by FM-PLL oscillator
- Sound IF (SIF) input for single reference Quasi Split Sound (QSS) mode (PLL controlled)

- SIF AGC for gain controlled SIF amplifier; single reference QSS mixer able to operate in high performance single reference QSS mode and in intercarrier mode, switchable via I<sup>2</sup>C-bus
- AM demodulator without extra reference circuit
- Alignment-free selective FM-PLL demodulator with high linearity and low noise
- I<sup>2</sup>C-bus control for all functions
- I<sup>2</sup>C-bus transceiver with pin programmable Module Address (MAD).

### 13.13.3.Pinning

SYMBOL	PIN	DESCRIPTION
VIF1	1	VIF differential input 1
VIF2	2	VIF differential input 2
OP1	3	output 1 (open-collector)
FMPLL	4	FM-PLL for loop filter
DEEM	5	de-emphasis output for capacitor
AFD	6	AF decoupling input for capacitor
DGND	7	digital ground
AUD	8	audio output
TOP	9	tuner AGC TakeOver Point (TOP)
SDA	10	I <sup>2</sup> C-bus data input/output
SCL	11	I <sup>2</sup> C-bus clock input
SIOMA	12	sound intercarrier output and MAD select
n.c.	13	not connected
TAGC	14	tuner AGC output
REF	15	4 MHz crystal or reference input
VAGC	16	VIF-AGC for capacitor; note 1
CVBS	17	video output
AGND	18	analog ground
VPLL	19	VIF-PLL for loop filter
V <sub>P</sub>	20	supply voltage (+5 V)
AFC	21	AFC output
OP2	22	output 2 (open-collector)
SIF1	23	SIF differential input 1
SIF2	24	SIF differential input 2

### 13.14.PI5V330

#### 13.14.1.General Description

The PI5V330 is well suited for video applications when switching composite or RGB analog. A picture-in-picture application will be described in this brief. The pixel-rate creates video overlays so two or more pictures can be viewed at the same time. An inexpensive NTSC titler can be implemented by superimposing the output of a character generator on a standard composite video background.

**Y-Delay SECAM**

Enter a SECAM B/G colour and black-white bar test pattern via RF. Adjust Y-Delay SECAM till the colour transients on the colour bar of the pattern become as sharper and colours between transients do not mix with each other as possible.

**Y-Delay NTSC**

Enter an NTSC colour and black-white bar test pattern via RF. Adjust Y-Delay NTSC till the colour transients on the colour bar of the pattern become as sharper and colours between transients do not mix with each other as possible.

**Y-Delay other**

Not used.

**Vertical Position Offset**

This value is fixed (127)

**Vertical Position Offset**

This value is fixed (127)

**Horizontal Position Offset**

This value is fixed (127)

**Horizontal Position Offset**

This value is fixed (127)

**Vertical Blank Start**

This register will be used only at 4:3 tube for 16:9 mode adjustment. It adjusts the vertical blank start position.

**Vertical Blank Stop**

This register will be used only at 4:3 tube for 16:9 mode adjustment. It adjusts the vertical blank stop position.

**Angle**

Change Angle by pressing Left/Right buttons till the vertical lines of the crosshatch pattern become completely perpendicular to horizontal lines without any angle of vertical deviation. Check and readjust ANGLE item if the adjustment becomes improper after some other geometric adjustments are done.

**Bow**

Change Bow by pressing Left/Right buttons till the vertical lines especially ones close to the left and right sides will of equal and symmetrical bending, i.e. they together will neither be towards left side nor right side. Check and readjust BOW item if the adjustment becomes improper after some other geometric adjustments are done.

**4:3 Horizontal Blank Start**

This register will be used only at 16:9 tube for 4:3 mode adjustment. It adjusts the horizontal blank start position.

**4:3 Horizontal Blank Stop**

This register will be used only at 16:9 tube for 4:3 mode adjustment. It adjusts the horizontal blank stop position.

**EHTV Compensation**

It's used to adjust the EHT compensation vertical gain coefficient.

**EHTTM Compensation**

It's used to adjust the EHT compensation time constant.

**EHTEW Compensation**

It's used to adjust the EHT compensation east/west gain coefficient.

**WDR**

The amplitude of R of RGB output can be adjusted with the drive parameter WDR.

**WDG**

The amplitude of G of RGB output can be adjusted with the drive parameter WDG.

**WDB**

The amplitude of B of RGB output can be adjusted with the drive parameter WDB.

**CR**

The DC offset values of R of RGB output can be adjusted with the cutoff parameter CR.

**CG**

The DC offset values of G of RGB output can be adjusted with the cutoff parameter CG.

**CB**

The DC offset values of B of RGB output can be adjusted with the cutoff parameter CB.

**COR coring level**

The amplitude of the correction signal is adjustable. Small noise amplitudes in the correction signal are suppressed by an adjustable coring circuit.

**REGULAR VERT\_POS (Regular mode Vertical Position)**

Enter a PAL B/G circle test pattern via RF. Change Vertical Position till the test pattern is vertically centered. Horizontal line at the center pattern is in equal distance both to upper and lower side of the picture tube. Check and readjust Vertical Position item if the adjustment becomes improper after some other geometric adjustments are done.

It's used to adjust the vertical position of regular mode.

**REGULAR VERT\_AMPL (Regular mode Vertical Amplitude)**

It's used to adjust the vertical amplitude of regular mode.

**REGULAR VERT\_SCOR (Regular mode Vertical S-Correction)**

It's used to adjust the vertical s-correction of regular mode.

**REGULAR VERT\_SSYM(Regular mode Vertical S Symmetry)**

It's used to adjust the vertical s-symetry of regular mode.

**REGULAR TRAPEZE (Regular mode Trapeze)**

Change Trapezium by pressing Left/Right buttons till vertical lines, especially lines at the sides of the picture frame became parallel to the both sides of picture tube as close as possible. Check and readjust TRPEZ item if the adjustment becomes improper after some other geometric adjustments are done.

It's used to adjust the trapeze of regular mode.

**REGULAR CUSHION (Regular mode Cushion)**

It's used to adjust the cushion of regular mode.

**REGULAR HOR\_COR\_SYM (Regular mode Horizontal Corner Symmetry)**

It's used to adjust the horizontal corners symmetry of regular mode.

**REGULAR HOR\_CORNER (Regular mode Horizontal Corner)**

It's used to adjust the horizontal corners of regular mode.

**REGULAR HORZ\_POS (Regular mode Horizontal Position)**

Enter a PAL B/G circle test pattern via RF. Change Horizontal Position until the picture is horizontally centered. Check and readjust Horizontal Position item if the adjustment becomes improper after some other geometric adjustments are done.

It's used to adjust the horizontal position of regular mode.

**REGULAR HORZ\_AMPL (Regular mode Horizontal Amplitude)**

It's used to adjust the horizontal amplitude of regular mode.

**PANORAMIC VERT\_POS (Panoramic mode Vertical Position)**

It's used to adjust the vertical position of panoramic mode.

**PANORAMIC VERT\_AMPL (Panoramic mode Vertical Amplitude)**

It's used to adjust the vertical amplitude of panoramic mode.

**PANORAMIC VERT\_SCOR (Panoramic mode Vertical S-Correction)**

It's used to adjust the vertical s-correction of panoramic mode.

**PANORAMIC VERT\_SSYM (Panoramic mode Vertical S-Symmetry)**

It's used to adjust the vertical s-symmetry of panoramic mode.

**PANORAMIC TRAPEZE (Panoramic mode Trapeze)**

It's used to adjust the trapeze of panoramic mode.

**PANORAMIC CUSHION (Panoramic mode Cushion)**

It's used to adjust the cushion of panoramic mode.

**PANORAMIC HOR\_COR\_SYM (Panoramic mode Horizontal corner symmetry)**

It's used to adjust the horizontal corners symmetry of panoramic mode.

**PANORAMIC HOR\_CORNER (Panoramic mode Horizontal corner)**

It's used to adjust the horizontal corners of panoramic mode.

**PANORAMIC HORZ\_POS (Panoramic mode Horizontal position)**

It's used to adjust the horizontal position of panoramic mode.

**PANORAMIC HORZ\_AMPL (Panoramic mode Horizontal amplitude)**

It's used to adjust the horizontal amplitude of panoramic mode.

**14:9 ZOOM VERT\_POS (14:9 Zoom mode Vertical Position)**

It's used to adjust the vertical position of 14:9 zoom mode.

**14:9 ZOOM VERT\_AMPL (14:9 Zoom mode Vertical Amplitude)**

It's used to adjust the vertical amplitude of 14:9 zoom mode.

**14:9 ZOOM VERT\_SCOR (14:9 Zoom mode Vertical S-Correction)**

It's used to adjust the vertical s-correction of 14:9 zoom mode.

**14:9 ZOOM VERT\_SSYM (14:9 Zoom mode Vertical Symmetry)**

It's used to adjust the vertical s-symmetry of 14:9 zoom mode.

**14:9 ZOOM TRAPEZE (14:9 Zoom mode Trapeze)**

It's used to adjust the trapeze of 14:9 zoom mode.

**14:9 ZOOM CUSHION (14:9 Zoom mode Cushion)**

It's used to adjust the cushion of 14:9 zoom mode.

**14:9 ZOOM HOR\_COR\_SYM (14:9 Zoom mode Corner Symmetry)**

It's used to adjust the horizontal corners symmetry of 14:9 zoom mode.

**14:9 ZOOM HOR\_CORNER (14:9 Zoom mode Horizontal Corner)**

It's used to adjust the horizontal corners of 14:9 zoom mode.

**14:9 ZOOM HORZ\_POS (14:9 Zoom mode Horizontal Position)**

It's used to adjust the horizontal position of 14:9 zoom mode.

**14:9 ZOOM HORZ\_AMPL (14:9 Zoom mode Horizontal Amplitude)**

It's used to adjust the horizontal amplitude of 14:9 zoom mode.

**16:9 ZOOM VERT\_POS (16:9 Zoom mode Vertical Position)**

It's used to adjust the vertical position of 16:9 zoom mode.

**16:9 ZOOM VERT\_AMPL (16:9 Zoom mode Vertical Amplitude)**

It's used to adjust the vertical amplitude of 16:9 zoom mode.

**16:9 ZOOM VERT\_SCOR (16:9 Zoom mode Vertical S-Correction)**

It's used to adjust the vertical s-correction of 16:9 zoom mode.

**16:9 ZOOM VERT\_SSYM (16:9 Zoom mode Vertical S-Symmetry)**

It's used to adjust the vertical s-symmetry of 16:9 zoom mode.

**16:9 ZOOM TRAPEZE (16:9 Zoom mode Trapeze)**

It's used to adjust the trapeze of 16:9 zoom mode.

**16:9 ZOOM CUSHION (16:9 Zoom mode Cushion)**

It's used to adjust the cushion of 16:9 zoom mode.

**16:9 ZOOM HOR\_COR\_SYM (16:9 Zoom mode Horizontal corner symmetry)**

It's used to adjust the horizontal corners symmetry of 16:9 zoom mode.

**16:9 ZOOM HOR\_CORNER (16:9 Zoom mode Horizontal corner)**

It's used to adjust the horizontal corners of 16:9 zoom mode.

**16:9 ZOOM HORZ\_POS (16:9 Zoom mode Horizontal position)**

It's used to adjust the horizontal position of 16:9 zoom mode.

**16:9 ZOOM HORZ\_AMPL (16:9 Zoom mode Horizontal amplitude)**

It's used to adjust the horizontal amplitude of 16:9 zoom mode.

**16:9 ZOOM SUBTITLE VERT\_POS (16:9 Zoom Subtitle mode Vertical position)**

It's used to adjust the vertical position of 16:9 zoom subtitle mode.

**16:9 ZOOM SUBTITLE VERT\_AMPL (16:9 Zoom Subtitle mode Vertical amplitude)**

It's used to adjust the vertical amplitude of 16:9 zoom subtitle mode.

**16:9 ZOOM SUBTITLE VERT\_SCOR (16:9 Zoom Subtitle mode Vertical S-Correction)**

It's used to adjust the vertical s-correction of 16:9 zoom subtitle mode.

**16:9 ZOOM SUBTITLE VERT\_SSYM (16:9 Zoom Subtitle mode Vertical Symmetry)**

It's used to adjust the vertical s-symmetry of 16:9 zoom subtitle mode.

**16:9 ZOOM SUBTITLE TRAPEZE (16:9 Zoom Subtitle mode Trapeze)**

It's used to adjust the trapeze of 16:9 zoom subtitle mode.

**16:9 ZOOM SUBTITLE CUSHION (16:9 Zoom Subtitle mode Cushion)**

It's used to adjust the cushion of 16:9 zoom subtitle mode.

**16:9 ZOOM SUBTITLE HOR\_COR\_SYM (16:9 Zoom Subtitle mode Horizontal Corner Symmetry)**

It's used to adjust the horizontal corners symmetry of 16:9 zoom subtitle mode.

**16:9 ZOOM SUBTITLE HOR\_CORNER (16:9 Zoom Subtitle mode Horizontal corner)**

It's used to adjust the horizontal corners of 16:9 zoom subtitle mode.

**16:9 ZOOM SUBTITLE HORZ\_POS (16:9 Zoom Subtitle mode Horizontal position)**

It's used to adjust the horizontal position of 16:9 zoom subtitle mode.

**16:9 ZOOM SUBTITLE HORZ\_AMPL (16:9 Zoom Subtitle mode Horizontal amplitude)**

It's used to adjust the horizontal amplitude of 16:9 zoom subtitle mode.

**OSD Position**

It's used to adjust the horizontal position of the OSD.

**BCLTHR**

Beam current threshold

**BCLG**

Beam current loop gain

**ROTATION (TILT)**

This adjustment only works when the TV has rotation option. Change TILT by pressing Left/Right buttons to rotate the complete raster clock-wise and counter clock-wise depending on the CRT. Check and readjust TRPEZ item if the adjustment becomes improper after some other geometric adjustments are done.

**LSLSA, LSLSB, LSL2, LSLTA, LSLTB (Luma soft limiter)**

LSLSA: Luma soft limiter slope A (fixed)

LSLSB: Luma soft limiter slope B (fixed)

LSL2: Luma soft limiter absolute limit (fixed)

LSLTA: Luma soft limiter segment A tilt point (fixed)

LSLTB: Luma soft limiter segment A tilt point (fixed)

**REFERENCE WDR RED (NORMAL)**

The amplitude of R of RGB output can be adjusted with the drive parameter WDR for the colour temperature of normal mode.

**REFERENCE WDR GREEN (NORMAL)**

The amplitude of G of RGB output can be adjusted with the drive parameter WDR for the colour temperature of normal mode.

**REFERENCE WDR BLUE (NORMAL)**

The amplitude of B of RGB output can be adjusted with the drive parameter WDR for the colour temperature of normal mode.

**REFERENCE CUTOFF RED**

It's fixed.

**REFERENCE CUTOFF GREEN**

It's fixed.

**REFERENCE CUTOFF BLUE**

It's fixed.

**IBRM**

Internal Brightness, the brightness for measurement can be set to measure at higher cutoff current. The measurement brightness is independent of the drive values. It's used to adjust the maximum brightness level.

**WDRV**

White drive measurement control. It is used to adjust the maximum contrast level.

**ACC\_SAT (COLOUR OFFSET)**

It's used to adjust the max. colour level.

**G2 CUTOFF REFERENCE**

It's fixed.

**G2 WDR REFERENCE**

It's fixed.

**POFS2 (RGB HORIZONTAL SHIFT)**

It's used to adjust the horizontal position of RGB signal.

**REFERENCE WDR RED COOL**

The amplitude of R of RGB output can be adjusted with the drive parameter WDR for the colour temp of cool mode.

**REFERENCE WDR GREEN COOL**

The amplitude of G of RGB output can be adjusted with the drive parameter WDR for the colour temp of cool mode.

**REFERENCE WDR BLUE COOL**

The amplitude of B of RGB output can be adjusted with the drive parameter WDR for the colour temp of cool mode.

**REFERENCE WDR RED WARM**

The amplitude of R of RGB output can be adjusted with the drive parameter WDR for the colour temp of warm mode.

**REFERENCE WDR GREEN WARM**

The amplitude of G of RGB output can be adjusted with the drive parameter WDR for the colour temp of cool mode.

**REFERENCE WDR BLUE WARM**

The amplitude of B of RGB output can be adjusted with the drive parameter WDR for the colour temp of cool mode.

**STANDARD MODE BRIGHTNESS**

It's used to adjust the brightness value of standard mode.

**STANDARD MODE COLOUR**

It's used to adjust the colour value of standard mode.

**STANDARD MODE CONTRAST**

It's used to adjust the contrast value of standard mode.

**FULL VERT\_POS (16:9 MODE)**

It's used to adjust the vertical position of 16:9 mode (full mode).

**FULL VERT\_AMPL**

It's used to adjust the vertical amplitude of 16:9 mode (full mode).

**FULL VERT\_SCOR**

It's used to adjust the vertical s-correction of 16:9 mode (full mode).

**FULL VERT\_SSYM**

It's used to adjust the vertical s-symmetry of 16:9 mode (full mode).

**FULL TRAPEZE**

It's used to adjust the trapeze of 16:9 mode (full mode).

**FULL CUSHION**

It's used to adjust the cushion of 16:9 mode (full mode).

**FULL HOR\_COR\_SYM**

It's used to adjust the horizontal corners symmetry of 16:9 mode (full mode).

**FULL HOR\_CORNER**

It's used to adjust the horizontal corners of 16:9 mode (full mode).

**FULL HORZ\_POS**

It's used to adjust the horizontal position of 16:9 mode (full mode).

**FULL HORZ\_AMPL**

It's used to adjust the horizontal amplitude of 16:9 mode (full mode).

**BRIGHT MODE BRIGHTNESS**

It's used to adjust the brightness value of bright mode.

**BRIGHT MODE COLOUR**

It's used to adjust the colour value of bright mode.

**BRIGHT MODE CONTRAST**

It's used to adjust the contrast value of bright mode.

**SOFT MODE BRIGHTNESS**

It's used to adjust the brightness value of soft mode.

**SOFT MODE COLOUR**

It's used to adjust the colour value of soft mode.

**SOFT MODE CONTRAST**

It's used to adjust the contrast value of soft mode.

**PERSONAL MODE FACTORY SETTING BRIGHTNESS**

It's fixed.

**PERSONAL MODE FACTORY SETTING COLOUR**

It's fixed.

**PERSONAL MODE FACTORY SETTING CONTRAST**

It's fixed.

**SCINC FOR PANAROMIC MODE**

scaler1 coefficient, this scaler is compressing the signal.

**SCINC1 FOR PANAROMIC MODE**

scaler2 coefficient, this scaler is expanding the signal.

**VOLUME AFTER APS**

It's used to adjust the volume level after APS.

**VERTICAL SCROLL**

It's used to adjust the step width for scroll function.

**14:9 HORIZONTAL START**

It's used to adjust the horizontal blank start position for 14:9 mode.

**14:9 HORIZONTAL STOP**

It's used to adjust the horizontal blank stop position for 14:9 mode.

**4:3 RGB HORIZONTAL AMPLITUDE**

It's used to adjust the horizontal amplitude in 4:3 mode for RGB signals.

**4:3 RGB CUSHION**

It's used to adjust the cushion in 4:3 mode for RGB signals.

**14:9 RGB HORIZONTAL AMPLITUDE**

It's used to adjust the horizontal amplitude in 14:9 mode for RGB signals.

**14:9 RGB CUSHION**

It's used to adjust the cushion in 14:9 mode for RGB signals.

**PANAROMIC RGB HORIZONTAL AMPLITUDE**

It's used to adjust the horizontal amplitude in panoramic mode for RGB signals.

**16:9 RGB HORIZONTAL AMPLITUDE**

It's used to adjust the horizontal amplitude in 16:9 mode for RGB signals.

**16:9 SUBTITLE RGB HORIZONTAL AMPLITUDE**

It's used to adjust the horizontal amplitude in 16:9 subtitle mode for RGB signals.

**FULL RGB HORIZONTAL AMPLITUDE**

It's used to adjust the horizontal amplitude in full mode for RGB signals.

**TELETEXT HORZ\_POS**

It's used to adjust the horizontal position of teletext signal.
