PTC thermistors for degaussing

Dual and Mono cased
145 V to 276 V

FEATURES

- Residual currents as low as 2 mA (p-p), ideal for high-resolution displays
- Long decay time
- Stable performance over a long time (>20000 operations)
- Self-extinguishing white plastic case ("UL 94.V.0")
- Design-in support available.

APPLICATIONS

- Colour televisions
- Colour monitors.

DESCRIPTION

For good picture definition, colour televisions and monitors must be degaussed by a strong alternating magnetic field which gradually and symmetrically decays to a small value of residual current. This can be achieved by connecting a PTC thermistor in the degaussing circuit.

The new generation of flat-screen, high-definition colour televisions and monitors require an excellent picture quality with high colour purity. This can only be achieved by a dual PTC device housing two PTC thermistors in intimate thermal contact, one being used to heat the other and so further reduce the residual current.

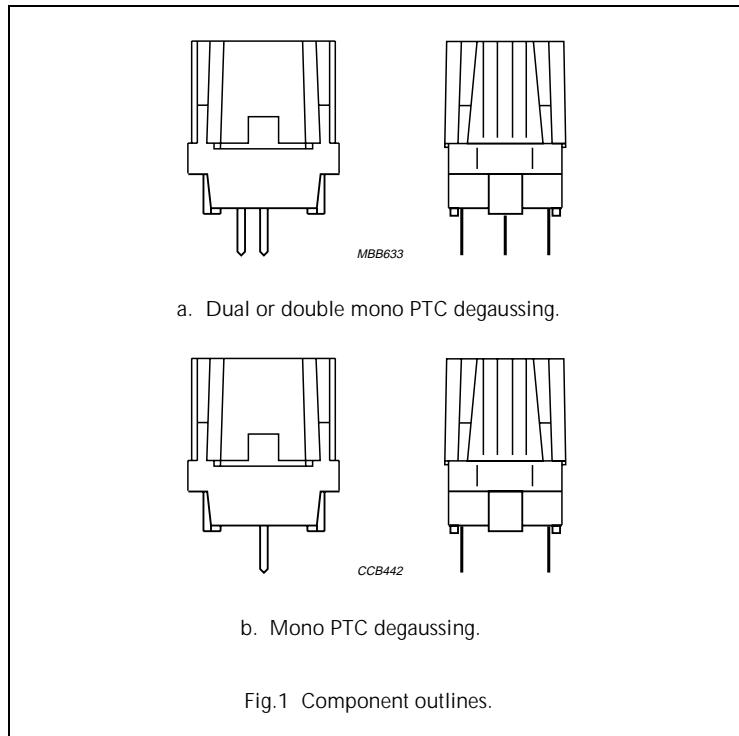

Fig.1 Component outlines.

QUICK REFERENCE DATA

PARAMETER	VALUE	UNIT
Resistance of degaussing PTC (R_s) at 25 °C	3 to 30	Ω
Standard tolerance on resistance of degaussing PTC (R_s) at 25 °C	20 and 25	%
Resistance of heater PTC (R_p) at 25 °C	3000	Ω
Standard tolerance on resistance of heater PTC (R_p) at 25 °C	75	%
Maximum AC voltage (RMS value)	145 to 276	V
Minimum inrush current (peak-to-peak value)	10 to 30	A
Temperature range (at maximum voltage)	0 to 60	°C
Available pitch:		
4e/1e	10.16 to 2.54	mm
4e/2e	10.16 to 5.08	mm
Standard pin length	4.2	mm
Detailed specifications based on	CECC 44000/IEC 60738

Application specific data

The data shown in Tables 1 and 2 is obtained from measurements at reference parameters. If these parameters do not correspond to the application parameters required, refer to Figures 7 to 13 in this data handbook, section "Introduction, PTC thermistors for degaussing".

Notes

1. All peak-to-peak currents are measured at typical resistance of the coil at 220 V, 50 Hz (AC) and at 25 °C.
2. Lower tolerances on resistance of degaussing PTC are available on request.
3. Lower minimum coil resistance is available on request.
4. Decay time is the time from the moment of maximum peak current until the half of the maximum peak inrush current.
5. Alpha maximum is the maximum decrease in current expressed in percent between two successive peaks.
6. Inrush currents and decay times at other voltage coil combinations can be derived from Figures 7 to 13 in this data handbook, section "Introduction, PTC thermistors for degaussing".
7. LT = low tolerance; LD = long decay.
8. Smallest packaging quantity (SPO) = 600 units.
